

“DLM has significantly streamlined our operation at the two Arla South East distribution sites. Before introducing DLM we were double entering data in multiple internal systems and spreadsheets. DLM worked in partnership with our transport team to consolidate and integrate all our data and workflow into one centralised on-line environment. Senior management, shift managers, drivers and agency all have secure 24/7 access to their relevant screens from anywhere with internet access. Due to the success of this project we are now working with DLM on other business improvement projects.”

Dave Parker,
Senior Transport Manager,
Arla Foods

Furthermore, Agency users have access to manage and nominate their own drivers to cover routes within DLM. Drivers have direct access to request holidays and overtime and view their own schedules. Both measures save time and resources and provide an audit trail of communication for Arla.

Achieving the key aim has brought a number of other benefits

1 A single point of access for all users, showing real time information

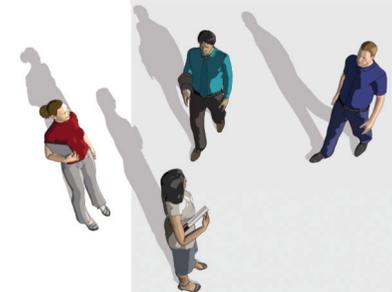

2 Centralisation of driver and rota data, including licence expiry

3 Centralisation of route data and requirements, via import or manual entry

4 Easy access to reporting across departments

Once implemented the Arla team found ways the system could further support their role and reduce workload. Throughout the project the DLM team worked closely with the system end users, to deliver enhancements and to bespoke reports and exports to reflect layouts familiar to the Arla teams.

Further deployments at the Arla South East distribution sites followed.
